Amendments to the Specification

Title:

Amend the title of the application as follows:

METHOD AND APPARATUS FOR ~~USING~~ DELAY TIME DURING SWITCHING EVENTS TO DISPLAY
PREVIOUSLY STORED INFORMATION ELEMENTS

Page 14, lines 1-10:

More particularly and with reference to Figures 2 and 5, when the input element
230 receives a zap event (step ~~402~~ 502) and reports its receipt to the executable code 212,
the executable code 212 activates a zap page interaction process (step 504). The zap page
interaction process can correspond to a process that is activated when the processor 204
executes the executable code 212 or it can correspond to a process separate from that of the
executable code 212 that is activated when a zap event is received (step 502). Once the zap
page interaction process has been instantiated, it transmits an appear event message to the
buffer 220 (step 506) indicating that the pre-rendered zap page 222 must be transmitted to
the display interface 240 and subsequently displayed on the TV screen 108 (step 408).
